

Product Release Update

New Notifications & App Designer Launch

Over the weekend, we rolled out our new Notifications system and new App Designer to all clients. There are two parts to ensure every client is updated.

1. *Administrative Console* - This has been updated for every client since it is a web-based system.
2. *App* - There is a new app build, version 2.7.0, which we will be pushing to all clients over the next several weeks. A new app build is not critical to have immediately, given that all the new functionality in this release will work with your existing app version. The only one new feature that requires the new build (2.7.0) is the Carousel Randomizer feature. Please contact clientsuccess@mobileup.io if you need to have this new app build immediately.

More information can be found when you log into your MobileUp Admin console and go to the Home Page.

Below, you will find the recording from our recent webinar (8/12 & 8/13) introducing these two updated systems. This recording can also be found in your Admin Home page under the Webinars tab. In the admin console, you will also find new help documentation under the '**?**'.

Reminder

mobileup Event School

In case you missed it, we are doing a monthly Event Refresher Course a.k.a. **MobileUp Event School**. This is for anyone on your team that wishes to learn more about the MobileUp Event solution, whether that's new staff (admins) or current staff that want a refresher. The MobileUp team will also answer questions, share best practices, allow clients to ask other clients questions, and review the event checklist to ensure you are ready for you next event.

Tuesday, September 1st, 11am CST
Tuesday, October 6th, 11am CST
Tuesday, November 3rd, 11am CST
Tuesday, December 1st, 11am CST
